### Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

### Code Layout Checklist:

| S.No | Code Quality Parameter    | Description                                   | Followed (Yes / No / Partial) | Remarks                                                       |
|------|---------------------------|-----------------------------------------------|-------------------------------|---------------------------------------------------------------|
| 1    | Consistent Indentation    | Uniform spacing/tabs used throughout the code | yes                           | Proper and consistent indentation is used throughout the code |
| 2    | Proper File Structure     | Files and folders are logically organized     | yes                           | Files and folders are logically organized                     |
| 3    | Meaningful Variable Names | Variables reflect their purpose clearly       | yes                           | Variables have clear and meaningful names                     |
| 4    | Function / Method Names   | Functions are descriptively named             | yes                           | Functions are descriptively named                             |
| 5    | Code Comments             | Inline and block comments explain logic       | yes                           | Comments are provided where necessary to explain the code     |
| 6    | Modular Design            | Code is split into reusable functions/modules | yes                           | Code is divided into reusable functions/modules               |
| 7    | No Redundant Code         | Duplicate or unused code is removed           | yes                           | Duplicate and unnecessary code has been avoided               |
| 8    | Error Handling            | Exceptions and errors are handled gracefully  | yes                           | Errors and exceptions are handled appropriately               |

### Reusable Components / Modules:

| S.No | Component / Module Name    | Language / Technology | Where Reused           | Reusability Level (High / Medium / Low) |
|------|----------------------------|-----------------------|------------------------|-----------------------------------------|
| 1    | Input/Validation Functions | Python                | Input handling modules | High                                    |

|   |                           |            |                               |        |
|---|---------------------------|------------|-------------------------------|--------|
| 2 | Data Processing Functions | Python     | Data processing modules       | High   |
| 3 | Databases Functions       | Python/SQL | Database operation            | High   |
| 4 | Utility Functions         | Python     | Multiple parts of the project | High   |
| 5 | Error Handling Module     | Python     | Throughout the project        | Medium |

**Overall Code Quality Assessment:**

| Aspect                   | Rating (1-5) | Comments                                                |
|--------------------------|--------------|---------------------------------------------------------|
| Code Layout & Structure  | 4            | Code is clear and easy to understand                    |
| Readability              | 4            | Files and modules are properly organized                |
| Reusability              | 4            | Functions and modules can be reused                     |
| Documentation / Comments | 4            | Code is easy to modify and maintain                     |
| Overall Score            | 4            | Good code quality with proper structure and readability |
