Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman
Type of Testing	Load Testing
Target Module / API	Login, Registration and Data Processing API
Test Environment	Local
Test Date	02-10-2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User Login Request.	10	60	Successfully response without errors
2	User Registration Request	10	60	User registered successfully
3	Data Processing Request	20	60	Data processed correctly
4	Multiple Requests/Load Test	50	120	System handles load without critical errors

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 seconds	pass	Good response time
2	Response Time (Max)	< 5 seconds	3.1seconds	Pass	Within target
3	Throughput (Req/sec)	>10 reg/sec	18 reg/sec	Pass	Good throughput
4	Error Rate	< 1%	0.5%	Pass	Low error rate
5	CPU Utilization	< 80%	62%	Pass	CPU usage is acceptable
6	Memory Utilization	< 80%	58%	pass	Memory usage is acceptable

Step 4: Observations & Analysis

Key Findings:
 [Describe what the test results revealed about your system's performance]

Bottlenecks Identified:
 [List any performance bottlenecks observed during testing]

Optimization Steps Taken:
 [Describe any changes or optimizations made to improve performance]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]

[Insert Screenshot 2 here]
